

# Intel® TeamStation™ System

## TeamStation™ System 5.0 Installation & Use

### Disabling Quick Logon

If you are using Microsoft Internet Explorer\* 4.x, browse to a directory and then log off from the Document Server, this directory will be available to any other user that logs on to the Document Server from that computer. The only way to ensure that this doesn't happen is to restart the system. If you're accessing the Document Server from the Intel® TeamStation™ System, you won't be able to shut down the system if Quick Logon is enabled. In that case, follow these steps for disabling Quick Logon:

1. Run AdminTools by selecting Start > Program Files > Intel TeamStation System > AdminTools.
2. If prompted, enter the name and password of a user with administrative privileges.
3. On the Logon/Security page, disable the Quick Logon option.
4. Restart the computer.

### Using a Television Instead of a Monitor

Although a monitor must be used when installing the Intel® TeamStation™ System 5.0, after the installation is complete, you can use a television instead of a monitor by following these steps:

1. Connect an S-Video cable between the Intel TeamStation System's S-Video output connector and the television's S-Video input connector. (Alternatively the composite output may be used with the appropriate cable.)
2. From the Control Panel, select Display > Settings.
3. Select "Use Hardware Default Settings" as the Refresh Frequency setting
4. Click OK.
