

Technical Bulletin CS-02-04

NetLink Software Variation Notification

Description

Due to enhancements within gateway software version .060 (and consequently all subsequent versions), there is a procedural change when upgrading to or downgrading from versions .060 and greater. This change involves having to reload appropriate Wireless Telephone software versions. For more information on how to upgrade the software versions on the Telephony Gateway, refer to the Related Documentation section below.

Related Documentation

Technical Bulletin 00-17 *How to ftp files to/from the NetLink 150 Telephony Gateway*

Technical Bulletin 01-05 *TFTP Upgrade of NetLink Wireless Telephones*

Setup

To obtain the latest software versions available, please reference the Polycom Corporate web site; www.polycom.com

Procedure

After the gateway software has been changed, administrators should reload the following files to the gateway to insure operability.

pdt02c.bin	Functional code that can be downloaded over-the-air and used by Direct Sequence Wireless Telephones
pdt06c.bin	Functional code that can be downloaded over-the-air and used by 11 Mb Direct Sequence Wireless Telephones
pft02c.bin	Functional code that can be downloaded over-the-air and used by Frequency Hopping Wireless Telephones
phintl.bin	International Image that can be downloaded over-the-air to allow phones to conform to various International Standards <i>(Note: This file is referenced by DS and FH Wireless Telephones, and must be upgraded appropriately.)</i>
mog600.bin	Functional code for the Open Application Interface (OAI)

Important

For a multiple gateway system, all downloadable software versions must match exactly.
