

SECURITY BULLETIN – June 30, 2015 Leap Second Insertion - **Version 1.0**

Security Bulletin Relating to June 30, 2015 Leap Second Insertion

DATE PUBLISHED: June 15, 2015

Effective January 1, 2014, the below applies to all Polycom security publications:

Polycom may at times issue either a **Security Advisory** or a **Security Bulletin** with regards to a particular vulnerability or set of vulnerabilities. If a **Security Advisory** is issued, this means that one more Polycom products are verified by Polycom to be affected by one or more vulnerabilities.

If a **Security Bulletin** is issued, Polycom is providing its customers with information about one or more vulnerabilities that have not been found by Polycom to directly affect any Polycom products, but that may be mistakenly thought to affect Polycom products. A **Security Bulletin** might also be issued when a customer's environment might be affected, when false positives might occur from vulnerability scans, or when any other possible (but not actual) concern might exist regarding Polycom products and the vulnerability.

This information applies to all Polycom products that use NTP to receive their time from other servers or devices on the network.

Situation Summary

On June 30, 2015, a leap second will be inserted into the NTP system's time servers. Some are concerned that the leap second might cause problems for Polycom products.

Situation Details

There is zero reason to suspect that the leap second will be a problem. All Polycom products that use NTP use newer NTP software packages that know how to process a leap second. All products tested so

far have proven to absorb the leap second properly. Finally, the last leap second inserted into the NTP system (on June 30, 2012) caused no problems for Polycom products at all.

Impact and Risk

None.

General Mitigations

None required.

Solution

None required.
