

## SECURITY BULLETIN – HDX versions older than 3.1.12 and Omni Botnet - Version 1.0

---

# Security Bulletin Relating to HDX (versions older than 3.1.12) and the Omni Botnet

DATE PUBLISHED: August 8, 2018

**Any information in this advisory is subject to change.**

*Please note: This is a living document, updated regularly until any product affected by any of the vulnerabilities in this bulletin has been repaired against that vulnerability. The newest version of this document will always reside at the following URL:*

[http://support.polycom.com/PolycomService/support/us/support/documentation/security\\_center.html](http://support.polycom.com/PolycomService/support/us/support/documentation/security_center.html)

### Summary

The “Omni” botnet is a network of computer systems that have been infected with malicious software and controlled as a group without the systems owners’ knowledge.

Polycom HDX endpoints that are running software versions older than 3.1.12 contain security vulnerabilities that have been previously listed on the Polycom Security Center (see link above). These security vulnerabilities may render HDX endpoints vulnerable to takeover by the Omni botnet.

### Solution

Update HDX endpoints to software version 3.1.12, which fixes known vulnerabilities and protects against Omni botnet infection. You can download version 3.2.12 from:

<https://support.polycom.com/content/support/emea/emea/en/support/video/hdx-series.html>

To determine if an HDX is infected with the Omni botnet, or has been exploited by known vulnerabilities in older versions of HDX software, perform the following steps:

- Login to the HDX web UI
- Go to the “diagnostics” tab
- Click on “download logs”
- Click on “download support information package”
- Your browser will download a file named “polycom\_info...tgz”.
- Uncompress this file, this will result in several files whose names start with “messages”
- Examine these files for the occurrence of this string: \${IFS} (without spaces)

If \$IFS appears in any log files, the HDX has been exploited by a known vulnerability in old HDX software, and the HDX should be factory reset and updated to 3.1.12 as soon as possible.

## Mitigations

Polycom recommends keeping the HDX endpoint's software up-to-date.

In addition, Polycom recommends following standard best practices for Unified Communications, as detailed in our best practices paper found at:

[http://support.polycom.com/global/documents/support/documentation/polycom\\_uc\\_security\\_best\\_practices\\_2015.pdf](http://support.polycom.com/global/documents/support/documentation/polycom_uc_security_best_practices_2015.pdf)

## Recognition

We would like to thank WootCloud (<https://www.wootcloud.com>) for providing intelligence on the nature of Omni infections on HDX endpoints.

## Contact

*Any customer using an affected system who is concerned about this vulnerability within their deployment should contact Polycom Technical Support – either call 1-800-POLYCOM or visit:*

[http://support.polycom.com/PolycomService/support/us/support/documentation/security\\_center.html](http://support.polycom.com/PolycomService/support/us/support/documentation/security_center.html)

*For the latest information. You might also find value in the high-level security guidance and security news located at:*
