Before You Begin

Topics:

- Related Poly and Partner Resources

The Poly G7500, Poly Studio X50, and Poly Studio X30 Privacy Guide provides information on how Poly products utilize customer data and how customers can configure G7500, Studio X50, and Studio X30 systems to process personal data.

Related Poly and Partner Resources

See the following sites for information related to this product.

- The Polycom Support Site is the entry point to online product, service, and solution support information including Licensing & Product Registration, Self-Service, Account Management, Product-Related Legal Notices, and Documents & Software downloads.

- The Polycom Document Library provides support documentation for active products, services, and solutions. The documentation displays in responsive HTML5 format so that you can easily access and view installation, configuration, or administration content from any online device.

- The Polycom Community provides access to the latest developer and support information. Create an account to access Poly support personnel and participate in developer and support forums. You can find the latest information on hardware, software, and partner solutions topics, share ideas, and solve problems with your colleagues.

- The Polycom Partner Network are industry leaders who natively integrate the Poly standards-based RealPresence Platform with their customers’ current UC infrastructures, making it easy for you to communicate face-to-face with the applications and devices you use every day.

- The Polycom Collaboration Services help your business succeed and get the most out of your investment through the benefits of collaboration.
Privacy-Related Options

Topics:

- System Usage Data Collected by Poly
- Call Detail Report (CDR)
- Configure the Recent Calls List
- Create Local Administrator Credentials
- Setting Up a Directory
- Register the System with a Provisioning Service
- Download Logs

There are different deployment options for your system that may affect the privacy options and supporting requirements described below. These details apply specifically to G7500, Studio X50, and Studio X30 systems deployed in a customer premises and managed by the customer.

System Usage Data Collected by Poly

Poly automatically collects and analyzes product usage data, device data, call detail records (CDRs), and quality of service (QoS) data from your system.

Data collected is used for the purposes of license verifications, product improvements, support operations, improving overall user experience, and future product innovations.

The system sends the following information to Poly:

- Device information, including the hardware and software versions of primary and secondary devices
- Device health data, including CPU and memory usage
- Call experience statistics
- Call detail record (CDR) and call health
- Device-level network analytics
- Data and statistics related to device or feature usage

Turn Off System Usage Data Collection

You can stop your system from sending usage data to Poly.

Procedure

1. In the system web interface, go to Servers > Cloud > Preferences.
2. Clear the check box to stop the data collection.
Call Detail Report (CDR)

When enabled, the Call Detail Report (CDR) feature keeps a record of every incoming, outgoing, and missed call that occurs on the system. If a call does not connect, the report shows the reason. In multipoint calls, each far site is shown as a separate call, but all have the same conference number.

You can find the CDR in the system logs.

Enable the Call Detail Report Feature

Enable the Call Detail Report feature to keep a record of the system's most recent call entries. When enabled, you can download call records and view the room system's call history. Within five minutes after ending a call, the CDR is written to memory.

Procedure

1. In the system web interface, go to Call Configuration > Recent Calls.
2. Mark the Call Detail Report check box.

Configure the Recent Calls List

You can display recent calls on the Place a Call page in the system web interface.

The recent calls list includes the following information:

- Name or number
- If the system placed or received the call
- Date and time

Procedure

1. In the system web interface, go to Call Configuration > Recent Calls.
2. Configure the following settings (your changes save automatically):

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Call Detail Report</td>
<td>Call detail record (CDR) information is in the system logs. When disabled, the system doesn't write call information.</td>
</tr>
<tr>
<td>Enable Recent Calls</td>
<td>Specifies whether to show recent calls on the local interface and the system web interface.</td>
</tr>
<tr>
<td>Maximum Number to Display</td>
<td>The maximum number of calls the system displays in the recent calls list.</td>
</tr>
</tbody>
</table>

Create Local Administrator Credentials

You can require local administrator credentials for in-room and remote access to the system.

Passwords for logging in to the system are case sensitive and can't contain more than 40 characters.
Procedure

1. In the system web interface, go to Security > Local Accounts.
2. Configure the following settings:

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Admin ID</td>
<td>The local administrator account name (default is admin).</td>
</tr>
<tr>
<td>Room Password</td>
<td>You must enter this password to change administrator settings in the local interface. The default password is the last six characters of the serial number listed in System Details and on the back of the device.</td>
</tr>
<tr>
<td>Remote Access Password</td>
<td>If you set this option, you must enter this password to access the system through the system web interface or command-line API (SSH or telnet). This password lets you perform device management tasks, such as updating the system’s software.</td>
</tr>
</tbody>
</table>

3. Optional: Do one of the following:
   - To use the local administrator Room Password for remote logins, leave the Use Room Password for Remote Access option enabled.
   - If you don’t want to use the local administrator Room Password for remote logins, disable the Use Room Password for Remote Access option.

   This setting specifies that the system uses the local administrator Room Password for remote logins. This setting is enabled by default.

4. Select Save.

Setting Up a Directory

You can register your system with a directory to call contacts in your organization.

The system supports the following directory features:

- Up to 2,000 local contacts
- Up to 2,000 Favorites
- Up to 200 Favorites groups
- Global groups (local groups aren’t supported)
- Up to 4,000 contacts from a Polycom GDS server

Register with the Polycom Global Directory Server

You can register your system with the Polycom Global Directory Server (GDS). Enable H.323 on your system before you register it with this directory server.
Procedure
1. In the system web interface, go to **Servers > Directory Servers**.
2. In the **Server Type** field, select **Polycom GDS**.
3. Configure the following settings:
   
<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Server Address</td>
<td>Specifies the IP or DNS address of the Polycom GDS.</td>
</tr>
<tr>
<td>Password</td>
<td>The Polycom GDS password, if one exists.</td>
</tr>
</tbody>
</table>
   
4. Select **Save**.

Register with an LDAP Directory Server
You can register your system with an LDAP directory server.

Procedure
1. In the system web interface, go to **Servers > Directory Servers**.
2. In the **Server Type** field, select **LDAP**.
3. Configure the following settings:
   
<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Server Address</td>
<td>Specifies the address of the LDAP directory server. When provisioned, this setting is read-only.</td>
</tr>
<tr>
<td>Server Port</td>
<td>Specifies the port for connecting with the LDAP server. When provisioned, this setting is read-only.</td>
</tr>
<tr>
<td>Base DN (Distinguished Name)</td>
<td>Specifies the top level of the LDAP directory where searches begin. When provisioned, this setting is read-only. To avoid LDAP registration issues, make sure the base DN is at least one level deeper than your domain. For example, enter <strong>ou=users,dc=example,dc=com</strong> instead of <strong>dc=example,dc=com</strong>.</td>
</tr>
<tr>
<td>Multitiered Directory Default Group DN</td>
<td>Specifies the top-level group of the LDAP directory required to access its hierarchical structure. When provisioned, this setting is read-only.</td>
</tr>
<tr>
<td>Authentication Type</td>
<td>Specifies the protocol for authenticating with the LDAP server: <strong>NTLM</strong>, <strong>Basic</strong>, or <strong>Anonymous</strong>.</td>
</tr>
<tr>
<td>Bind DN (Distinguished Name)</td>
<td>Specifies the bind DN when using basic authentication. Available only when you set <strong>Authentication Type</strong> to <strong>Basic</strong>. When provisioned, this setting is read-only.</td>
</tr>
<tr>
<td>Setting</td>
<td>Description</td>
</tr>
<tr>
<td>-----------------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Use SSL (Secure Socket Layer)</td>
<td>When enabled, encrypts data to and from the LDAP server.</td>
</tr>
<tr>
<td>Domain Name</td>
<td>Specifies the domain name for registering with the LDAP server.</td>
</tr>
<tr>
<td>User Name</td>
<td>Specifies the user name for registering with LDAP server.</td>
</tr>
<tr>
<td>Password</td>
<td>Specifies the password for registering with the LDAP server.</td>
</tr>
</tbody>
</table>

4. Select **Save**.

**Managing Contacts and Favorites**

You can create local contacts and designate favorites for your system.

**Types of Favorites**

The system web interface displays several types of favorites.

<table>
<thead>
<tr>
<th>Directory Server Registration</th>
<th>Types of Contacts</th>
<th>Details</th>
</tr>
</thead>
<tbody>
<tr>
<td>Polycom GDS</td>
<td>• Directory entries created locally by the user.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>• References to Polycom GDS entries added to Favorites by the user.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>These entries are available only if you successfully register the system with Polycom GDS. Users can delete these entries from Favorites, but they can’t edit these entries. Users can copy these entries to other Favorites and remove them from those groups.</td>
<td></td>
</tr>
<tr>
<td>LDAP with H.350</td>
<td>• Directory entries created locally by the user.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>• References to LDAP directory entries added to Favorites by the user.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>These entries are available only if the system can successfully access the LDAP server. Users can delete these entries from Favorites, but they can’t edit these entries. Users can copy these entries to other Favorites and remove them from those groups.</td>
<td></td>
</tr>
</tbody>
</table>

**Manage Contacts**

You can add contacts individually or in bulk in the system web interface.

You need local administrator access for this feature.
Procedure

1. Do one of the following:
   - Go to Dashboard > Contacts.
   - Go to Place a Call > Contacts.

2. Select More and choose one of the following options:
   - New Contact: Create a single contact.
   - Import: Upload contacts in bulk using an XML file (can't exceed 3 MB).
   - Export: Download local contacts to an XML file (doesn’t include contacts available through a directory server).

Unfavorite a Contact

Unfavorite a contact to remove the contact from your Favorites list.

Procedure

1. Go to Place a Call > Favorites.
2. Choose a favorite card, then select Unfavorite.
   The contact is removed from the Favorites list.

Register the System with a Provisioning Service

Before you can provision a system, you must register it with a provisioning service.

Note: Make sure to configure your provisioning server (for example, RealPresence Resource Manager) ahead of time so that it recognizes and works with your endpoint.

For information on how to provision your system with RealPresence Resource Manager, see the Polycom RealPresence Resource Manager System Operations Guide.

Procedure

1. In the system web interface, go to Servers > Provisioning Server.
2. Select Enable Provisioning.
3. Select Load Discovered Information.
   The registration fields update automatically if your system detects a provisioning server.
4. Optional: If your system didn’t detect a provisioning server, complete the following fields (contact your network administrator for help):

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Server Type</td>
<td>Specifies the type of provisioning service (for example, RealPresence Resource Manager).</td>
</tr>
<tr>
<td>Server Address</td>
<td>Address of the system running the provisioning service.</td>
</tr>
<tr>
<td>Domain Name</td>
<td>Domain for registering with the provisioning service.</td>
</tr>
<tr>
<td>User Name</td>
<td>User ID for registering with the provisioning service.</td>
</tr>
</tbody>
</table>
### Setting Description

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Password</td>
<td>Password for registering with the provisioning service.</td>
</tr>
</tbody>
</table>

5. Select **Save**.
6. Verify that **Registration Status** changes from **Pending** to **Registered**.
   It might take a minute or two for the status to change.

## Download Logs

You can retrieve the logs associated with your system and some of its connected devices.

**Procedure**

1. In the system web interface, go to **Diagnostics > Logs**.
2. Select **Download Logs**.
   The log package, which includes call detail record (CDR) information, downloads as a `.tgz` file.
   The date and time of the log entries display in GMT.

How Data Subject Rights Are Supported

Topics:

▪ Right to Access
▪ Right to Be Informed
▪ Right to Data Portability
▪ Right to Erasure
▪ Right to Rectification
▪ Right to Object to Processing
▪ Right to Restrict Processing

The following information shows how data subject rights are supported.

Right to Access

A data subject has the right to view and/or obtain a copy of all of their own personal data.

Personal data about specific participants in conferences can be viewed or downloaded via the CDR.

For details about how to access personal data sent to Polycom RealPresence Resource Manager, see the User Data Collection section of the Polycom RealPresence Resource Manager Operations Guide. To see details of the usage data sent to Poly, see the Security and Privacy White Paper for Poly G7500, Studio X50, and Studio X30.

Related Links
Download Logs on page 9

Right to Be Informed

What personal data is collected?
See Purposes of Processing Personal Data on page 13.

How is personal data used?
See Purposes of Processing Personal Data on page 13.

How long is personal data kept?

All data saved to the system is retained until manually deleted by the administrator. This includes saved content files, recent rooms information, and configuration settings. Log files are automatically deleted (oldest first) when the file limit is reached. By default, call detail records (CDRs) are overwritten by new CDR data via rolling logs configurable by the system administrator.

For details about how to access personal data sent to Polycom RealPresence Resource Manager, see the User Data Collection section of the Polycom RealPresence Resource Manager Operations Guide. To see details of the usage data sent to Poly, see the Security and Privacy White Paper for Poly G7500, Studio X50, and Studio X30.
See Purposes of Processing Personal Data on page 13 and How Personal Data is Deleted on page 15.

Is personal data shared with any third parties and if so, who?

If personal data is made available when working with Poly support, this data may be shared with Poly’s engineering team (which may include third parties and contractors).

How can a data subject be notified of a data breach?

Data Subjects have a right to be notified when their data has been processed without authorization. Please contact your system administrator for the most appropriate method to receive this information.

Right to Data Portability

A data subject has the right to receive a copy of all personal data in a commonly-used, machine-readable format.

- CDRs can be downloaded in CSV format.
- The Address Book can be exported in XML format.
- Audit and log files can be downloaded in plain text format.

Right to Erasure

Any customer personal data made available when working with Poly support will be erased by requesting erasure through your Poly support representative.

For details on how to erase customer personal data from the system, see How Personal Data is Deleted on page 15.

Right to Rectification

A data subject has the right to make corrections to inaccurate or incomplete personal data.

Personal data specific to device configuration can be edited or updated by the device administrator.

Personal data about specific participants in conferences cannot be edited or updated because the information derives from the device of origin.

Poly does not manipulate data made available during the support process, so any rectification of inaccuracies of personal data must be performed by customer directly.

Right to Object to Processing

Not applicable.
Right to Restrict Processing

Not applicable.
Purposes of Processing Personal Data

For these details, see the Security and Privacy White Paper for Poly G7500, Studio X50, and Studio X30.
How Administrators Are Informed of Any Security Anomalies (Including Data Breaches)

<table>
<thead>
<tr>
<th>Security Anomaly Type</th>
<th>Where to Check</th>
<th>Recommended Frequency to Check</th>
</tr>
</thead>
<tbody>
<tr>
<td>All active alerts</td>
<td>An administrator can configure alerts and monitor using the local interface, system web interface, SNMP monitoring, or Polycom RealPresence Resource Manager (if configured).</td>
<td>Once daily</td>
</tr>
</tbody>
</table>
How Personal Data is Deleted

Topics:

- Reset System Settings
- Factory Restore the System

How Customer Personal Data is Deleted

<table>
<thead>
<tr>
<th>Data Type</th>
<th>Steps to Delete</th>
<th>Deletion Method</th>
</tr>
</thead>
</table>
| Call detail record (CDR)   | • By default, CDRs are overwritten by new CDRs periodically via rolling logs configurable by device administrator.  
                               • CDRs can also be deleted by performing a standard or comprehensive restore operation.  
                               • Factory restore the system.                                                                 | File delete with overwrite.     |
| Directory/Contacts         | • See the "Setting Up a Directory" section in the Poly Video Mode Administrator Guide.  
                               • The contacts can also be deleted by resetting the system.                                      | Delete from database.            |
| System log files           | • Log files are automatically deleted by the system (oldest first) when the system reaches the file limit. These settings can be configured by the device administrator from Diagnostics. > Logs > Log Management.  
                               • Log files are also deleted by resetting the system.                                                  | File delete with overwrite.     |
| All other personal data stored locally on the system | Factory restore the system.                                                        | File delete with overwrite.     |

For details about how personal data is deleted on Polycom RealPresence Resource Manager, see the User Data Collection section of the Polycom RealPresence Resource Manager Operations Guide.

Reset System Settings

You can reset your system to its default configuration settings.
You may need to perform a system reset for a variety of reasons, for example, when moving a device to a new location.

Resetting your system deletes all but the following data:

- Current software version
- User-installed PKI certificates
- Local directory entries
- Logs
- Call detail record (CDR)

You also can choose not to retain some of this data after the system resets.

**Note:** System resets restore your system to its original mode of operation (for example, Poly Video Mode or Poly Partner Mode).

**Procedure**

1. In the system web interface, go to **Diagnostics > System Reset**.
2. Select **Reset All System Configurations**.
3. Optional: Clear any of the following check boxes for data you want to delete as part of the reset:
   - Keep installed certificates.
   - Keep the directory entries.
   - Keep the system logs.
   - Keep the system call detail reports.
4. Select **Reset**.

**Factory Restore the System**

A factory restore completely erases the system’s flash memory and restores it to the latest major software version (x.0).

The system doesn’t save the following data with a factory restore:

- Current software version
- Logs
- User-installed PKI certificates
- Local directory entries
- Call detail record (CDR)

**Procedure**

1. Disconnect the power supply to turn off the system.
2. Do one of the following:
   - On the front of the G7500 insert a straightened paper clip through the factory restore pinhole.
3. While continuing to hold the restore button, reconnect the power supply to turn the system on.
4. When the system LED indicator light blinks amber, stop pressing the restore button.
