If you are setting up a Polycom Ceiling Microphone Array, begin on page 2.
If you are setting up a Polycom Ceiling Microphone Array Extension Kit, begin on page 8.
If you are setting up a Polycom telepresence system, refer to the Installation Guide for your ITP product.

Before you begin, make sure that your ceiling can support up to .9 kg (2 lbs). Also, verify that the installation parameters described in this document comply with the code requirements in your local jurisdiction.
1. Verify that the number of pins on the cable connector matches the number of pins on the connector on the electronics enclosure.

If you do not have a suspended ceiling in your room continue with Step 12 on page 5.

2. For suspended ceilings

If your ceiling is 3.05 m (10 ft) or higher, you should order an optional 1.82 m (6 ft) drop cable (2457-26764-072 for black or 2457-26765-072 for white) for each Ceiling Microphone Array.

If height adjustments are required for the microphone ball, clip the cable clip onto the cable. When you later place the electronics enclosure on the ceiling tile, you can rest the clip above the hole in the ceiling tile and adjust the length of the cable as needed.

If you are creating your own cables, refer to the Integrator Reference Guide for your product for cable pin-outs at http://support.polycom.com. Ensure that the cables meet all local building code regulations.
Optional

For added safety when removing the ceiling tile at a later time, securely attach the electronics enclosure to the ceiling supports using suitable wire or other hardware appropriate for your ceiling type and in accordance with local regulations. Be sure that the length of wire you use to secure the electronics enclosure is short enough to prevent the enclosure from striking the person removing the ceiling tile.

Polycom Ceiling Microphone Array Setup Sheet
To attach the electronics enclosure, use suitable hardware for your ceiling type. Align the enclosure so that, when the Microphone Array is attached, the dot on the Microphone Array points toward the main display, as shown in Step 16.

Point the dot (located on the band around the middle of the microphone ball) toward the main display.
