Before You Begin

Topics:

- [Audience, Purpose, and Required Skills](#)
- [Related Poly and Partner Resources](#)

This guide contains overview information, procedures, and references you can use to perform tasks with your video system.

The information in this guide applies to all the following Poly video systems except where noted:

- Poly G7500 (model: P011)
- Poly Studio X50 (model: P017)
- Poly Studio X30 (model: P018)

Audience, Purpose, and Required Skills

This guide is intended for beginning users, as well as intermediate and advanced users, who want to learn more about the features available with the system.

Related Poly and Partner Resources

Getting Started

Topics:

- [Poly Partner Mode Overview](#)
- [Product Overview of Poly Video Systems](#)
- [LED Status Indicators](#)
- [Powering the System On and Off](#)
- [Wake the System](#)
- [Accessibility Features](#)

Before you use your system, familiarize yourself with its features and user interface.

Poly Partner Mode Overview

Poly Partner Mode allows you to run third-party conferencing applications on supported Poly video systems. For example, after powering on your system for the first time, you can select Zoom Rooms to place Zoom calls.

Refer to the supported partner documentation for information on using third-party applications:

- **Zoom:** <https://support.zoom.us/hc/en-us>
- **GoToRoom by LogMeIn:** <https://support.goto.com/products>
- **8x8:** <https://support.8x8.com/>

Product Overview of Poly Video Systems

Poly G7500, Studio X50, and Studio X30 systems in Partner Mode can seamlessly join meetings using third-party conferencing applications.

Note: Exact features and capabilities can vary between partner applications. See the application's documentation for information.

Poly G7500 System Features and Capabilities

G7500 systems support the following features:

- Peripheral cameras and microphones make the system scalable for medium rooms and up to large integrated rooms
- Placing and joining video calls
- Sharing wireless and wired content
- Camera tracking technology that can automatically zoom in on the person talking or frame the group of people in the room (depending on how you configure the system)

- Poly NoiseBlockAI, which eliminates background and extraneous sound during calls in common working environments when no one is talking
- Polycom Acoustic Fence technology, which enables video conferencing in open workspaces by capturing only the voices in a defined area
- HDMI: Single input and dual output

Poly Studio X50 Features and Capabilities

Studio X50 systems support the following features:

- All-in-one collaboration system for huddle rooms and small-to-medium rooms
- No need for a separate PC, laptop, or codec to run video-conferencing software
- Placing and joining video calls
- Sharing wireless and wired content
- Built-in 4K camera with ultra-wide 120-degree field of view
- Camera tracking technology that automatically frames the group of people in the room
- High-fidelity, built-in stereo microphones that pick up sound within 3.66 m (12 ft) and use spatial audio for life-like presence and clarity
- Poly NoiseBlockAI, which eliminates background and extraneous sound during calls in common working environments when no one is talking
- Dual stereo speakers
- HDMI: Single input and dual output

Poly Studio X30 Features and Capabilities

Studio X30 systems support the following features:

- All-in-one collaboration system for huddle rooms and small-to-medium rooms
- No need for a separate PC, laptop, or codec to run video-conferencing software
- Placing and joining video calls
- Sharing wireless and wired content
- Built-in 4K camera with ultra-wide 120-degree field of view
- Camera tracking technology that automatically frames the group of people in the room
- High-fidelity, built-in stereo microphones that pick up sound within 3.66 m (12 ft) and use spatial audio for life-like presence and clarity
- Poly NoiseBlockAI, which eliminates background and extraneous sound during calls in common working environments when no one is talking
- Single mono speaker
- HDMI: Single input and output

Overview of Poly G7500, Studio X50, and Studio X30 Hardware

The following figures and tables provide information about hardware features available on your system.

Poly G7500 Hardware

The following figure displays the hardware features on the Poly G7500 system. The table lists each feature numbered in the figure.

Poly G7500 Feature Descriptions

Ref. Number	Feature	Feature Description
1	Reset button	Resets the Poly G7500 to the factory software version
2	LED indicator	Indicates the system status
3	Remote control pairing button	Enables the Bluetooth remote control pairing mode
4	Restart button	Restarts your system

Poly Studio X50 Hardware

The following figure displays the hardware features on the Poly Studio X50 system. The table lists each feature numbered in the figure.

Poly Studio X50 Feature Descriptions

Ref. Number	Feature	Feature Description
1	Screen	Protective screen that covers the front of your system
2	Microphone array	Microphone array that captures audio
3	Camera	Camera with a privacy cover that enables or disables the video input as you choose

Ref. Number	Feature	Feature Description
4	Speakers	Stereo audio output
5	LED indicators	Indicates the system status and information on the tracked speaker

Poly Studio X30 Hardware

The following figure displays the hardware features on the Poly Studio X30 system. The table lists each feature numbered in the figure.

Poly Studio X30 Feature Descriptions

Ref. Number	Feature	Feature Description
1	Microphone array	Microphone array that captures audio
2	LED indicators	Indicates the system status and information on the tracked speaker
3	Camera	Camera with a privacy cover that enables or disables the video input as you choose
4	Speaker	Mono audio output

Poly Studio X50 and Studio X30 Privacy Cover

The Poly Studio X50 and Studio X30 systems provide a physical cover that you can place over the camera lens to protect your privacy.

LED Status Indicators

The following figures display the LEDs on your systems. The tables list each LED indicator and its associated status.

LED Status Indicators for the G7500 System

Use the LED on the front right corner of the codec to get information on the state of your system.

G7500 System LED Status Indicators

Indicator	Status
Blinking white	Powering on
Solid white	Working normally
Blinking amber	Update in progress
Solid amber	Sleeping

Indicator	Status
Blinking red	Error preventing normal operation

LED Status Indicators for the Studio X50 and Studio X30 Systems

The system provides an LED light bar above the camera to help you understand the system's behaviors.

Basic Studio X50 and Studio X30 LED Indicators and Status

Indicator	Position	Status
Solid white	All	Boot initialization in progress
Blinking blue	Twelve in the middle	Bluetooth in discovery
Solid blue for 3 seconds	All	Bluetooth paired
Blinking green	All	Incoming call
Solid green	All	Outgoing call
Solid green	Four to eight (when in the middle), indicating the tracked speaker or the direction of the camera	Working The lights are green with supported applications, with the following cases: <ul style="list-style-type: none"> Tracking people in the group framing and speaker tracking mode. Indicating the direction of the camera that you customize in the pan-tilt-zoom (PTZ) mode.
Solid amber	Twelve in the middle	Standing by The system is in sleep mode with no active video output.
Pulsing red	Twelve in the middle	Call on hold
Pulsing green	Twelve in the middle	Call on hold (by far site)
Solid white for 3 seconds	Twelve in the middle	Saving a preset
Solid red	All	Muted microphone
Pulsing amber	All	Firmware update in progress
Blinking red	All	Error preventing normal operation

Powering the System On and Off

The system turns on when you plug it into a power source. The system doesn't have a power button, so you must unplug the power cable to power it off.

Note: Don't power off the system during maintenance activities (for example, while a software update is in progress).

Wake the System

After a period of no activity, the system enters sleep mode (if configured by your administrator). You can wake it using a touch monitor or Poly TC8.

Procedure

- » Do one of the following:
 - If you're using a touch monitor, tap the primary screen.
 - If you're using the TC8, tap the screen.

Accessibility Features

Polycom products include a number of features to accommodate hearing-, vision-, mobility-, or cognitively-impaired users.

Features for Hearing-Impaired and Deaf Users

Certain features enable users with hearing impairments to use the system.

If needed, contact your administrator to enable the following features.

Features for Hearing-Impaired Users

Accessibility Feature	Description
Visual notifications	Status and icon indicators let you know when you have incoming, outgoing, active, or held calls. Indicators also alert you of the device's status and when features are enabled.
Status indicator lights	The system and its microphones use LEDs to indicate some statuses, including if your microphones are muted.
Adjustable call volume	While in a call, you can raise or lower the volume of the device.

Features for Vision-Impaired and Blind Users

Certain features enable users with visual impairments to use the system.

If needed, contact your administrator to enable the following features.

Features for Vision-Impaired and Blind Users

Accessibility Feature	Description
Auto-answering	You can enable the phone to auto-answer calls.
Ringtones	An audible tone plays for incoming calls.
Join and leave tones	The system plays a tone when someone joins or leaves a conference call.

Features for Mobility-Impaired Users

Certain features enable users with mobility impairments to use the system.

If needed, contact your administrator to enable the following features.

Features for Mobility-Impaired Users

Accessibility Feature	Description
Poly TC8	The TC8 enables you to control the system and to perform tasks such as placing calls.
Auto-answering	You can enable the system to auto-answer calls.
Calling from a personal device	With administrator credentials, you can wirelessly access the system web interface from your own device to make calls and manage contacts and favorites.
Touch-capable monitor support	If you have a touch-capable monitor connected to the system, you can select, swipe, and press the screen to perform functions and activate features.

Sharing Content

Topics:

- [Share Content Using an HDMI Connection](#)

To enhance the collaboration experience, you can share documents, graphics, and videos with other participants using a computer.

Share Content Using an HDMI Connection

Share content from your device through an HDMI connection. This method doesn't require you to connect using a wireless service.

Procedure

- » Connect your device to the video system's HDMI input port.

Using the System as a Camera and Audio Peripheral

Topics:

- [Laptop and Cable Requirements](#)
- [Connect a Windows or Mac Laptop](#)
- [Incoming Calls to the System](#)
- [Disconnect a Windows or Mac Laptop](#)

With Poly Device Mode, you can use a Poly video system as your laptop's external camera, microphone, and speaker accessory.

For example, instead of using your laptop's camera for Microsoft Teams calls, you can connect to the Studio X30 and use its 4K camera that automatically follows the conversation in the room. You also get to use Poly echo-cancelling microphone and speaker technology during calls.

Once you connect your laptop with a USB cable, you control the video system's camera and audio features using your laptop's third-party conferencing application.

If needed, you can also mirror your laptop's screen on the video system's monitors with an HDMI cable.

Laptop and Cable Requirements

Make sure that your laptop and USB cable allow you to use a Poly video system as a camera and audio accessory (i.e., Poly Device Mode).

Your laptop must have one of the following operating systems:

- Windows 10 version 1803 or later
- macOS version 10.12 or later

Remember when choosing a USB cable:

- Use a cable with at least one USB-C connection for your video system.
- If possible, use a USB 3.0 cable to ensure connection reliability and video and audio quality. (You can also use a USB 2.0 cable.)
- If you need a connection that's longer than 2 m (6.6 ft), use a self-powered USB booster extension cable.
- Don't use a cable used only for charging devices.

Connect a Windows or Mac Laptop

To use the video system as an external camera and audio accessory, you must enable Poly Device Mode and connect your laptop with a USB cable.

Note the following (contact your administrator if you need help):

- If your conferencing application uses echo cancellation, disable that feature.

- Poly Device Mode isn't available if the video system's USB ports are disabled.

Procedure

1. From the right border of your screen, swipe left. Then select **Device Mode** .
2. Connect the USB cable to your laptop.
3. Connect the cable to the video system's **USB-C** port.
4. Optional: To mirror your laptop's screen on a video system monitor, connect the laptop using the system's HDMI input port.

Incoming Calls to the System

If there's an incoming call, the video system may exit Poly Device Mode. This depends on the partner conferencing application the video system is using.

Disconnect a Windows or Mac Laptop

Any camera options you change on the video system with your USB-connected laptop revert to their previous settings when you exit Poly Device Mode.

Procedure

- » Do one of the following:
 - On the video system local interface or TC8 device (if you have one), select **Exit Mode** .
 - Unplug the cables connecting your laptop and video system. After a couple minutes, you see the video system home screen.

Settings

Topics:

- [Cameras](#)
- [Audio Adjustments](#)

Before or during calls, you can adjust the system volume. During calls, you can adjust your camera's position.

Cameras

Depending on the camera type, you can control the following options:

- Adjust near-site (local) camera positions.
- Turn tracking on or off.

Adjust an In-Room Camera

To enhance the view of meeting participants, make adjustments to the in-room camera.

If camera tracking is on, camera control is unavailable. Turn tracking off to access camera controls.

You can only make camera adjustments during a call.

With the Studio X50 and Studio X30 systems, you can't pan or tilt the camera if it's zoomed all the way out.

Procedure

1. From the right border of your screen, swipe left.
2. Go to **Camera Settings** > **Camera Controls**.
3. Press **+** to zoom in or **-** to zoom out. Press the arrows to tilt up and down or to pan left to right.
4. To exit the control screen, select **Back** ←.

Turn Camera Tracking On or Off

When camera tracking is on, the camera automatically frames the group of people in the room or the current speaker (depending on your camera and how your system is configured).

Procedure

1. From the right border of your screen, swipe left.
2. Select **Camera Settings**.
3. Select **Tracking On**  or **Tracking Off** .

Audio Adjustments

You can control several audio settings on the system.

Adjust the Volume

You can adjust the volume before or during a call.

Procedure

- » Use the volume slider on the device controlling your video system.

Troubleshooting

Topics:

- [Poly Device Mode](#)

Refer to the following topics to help you diagnose and fix problems while using your system.

Poly Device Mode

Use these topics to troubleshoot problems you may encounter using Poly Device Mode.

Audio Levels are Too High or Low

Symptom:

In Poly Device Mode, audio from the video system speakers is too loud or it's difficult to hear call participants.

Problem:

In Poly Device Mode, your conferencing application and laptop control the video system's audio. You may need to adjust those volume controls.

Workaround:

Follow these steps until you get the audio levels you want:

Procedure

1. Adjust your conferencing application's volume.
2. Adjust your laptop's volume.

Conferencing Application Doesn't Use System Camera or Audio

Symptom:

You can't use the video system's camera or audio in Poly Device Mode.

Problem:

Your conferencing application by default may choose the connected monitor speakers instead of, for example, the Studio X50 speakers.

Workaround:

Procedure

- » In your conferencing application, select the video system as your speaker, microphone, and camera device.

Can't Use System's Camera or Audio

Symptom:

You may notice the following while using Poly Device Mode:

- In your laptop's conferencing application, you can't select the video system as a camera or audio source.
- The video system's camera and audio seem unavailable.
- The video system's camera doesn't display live video.

Problem

There could be a few reasons for these types problems. For instance, your conferencing application by default may choose the connected monitor speakers instead of, for example, the Studio X50 speakers.

Workaround:

Follow these steps until you fix your problem:

Procedure

1. In your conferencing application, select the video system as your speaker, microphone, and camera device.
2. In your laptop settings, select the video system as your speaker, microphone, and camera device.
3. Exit and restart Device Mode.
4. Replug the USB cable.
5. Connect the cable to a different USB port on your laptop.
6. Try using a different USB cable.
7. Restart your laptop.

Improve Audio Quality

Symptom:

Audio quality during calls in Poly Device Mode could be better. For example, people on the call notice interference or dropped words when you're speaking.

Problem:

You may encounter these problems for the following reasons: additional USB connections, a bad cable, or audio processing settings.

Workaround:

Follow these steps until your audio quality improves:

Procedure

1. Remove USB audio devices (such as a headset) connected to your laptop.
2. Connect your laptop and video system with a different USB cable.
3. If your conferencing application uses echo cancellation, disable that feature.
4. If you're playing a musical instrument, enable M-Mode in the system web interface.

Contact your administrator to set up this feature.

Improve Laptop Screen Mirroring

Symptom:

When mirroring your laptop screen with an HDMI connection, the picture on the connected monitor isn't ideal.

Problem:

The resolution on your laptop may need to be adjusted for the monitor connected to the Poly video system.

Workaround:

Follow these steps until screen mirroring quality improves:

Procedure

1. Adjust your laptop's resolution settings.
2. Adjust your laptop's display settings so the screen duplicates on the monitor.
