

Patch Notes

Poly® RealPresence® Collaboration Server

Build ID: 8.7.5.881
Released File: OVA, ISO, BIN, Upgrade File
Release Date: November 15, 2019

Purpose

This patch includes fixes for the following issues when applied over the RealPresence Collaboration Server 8.7.5.7 release.

<i>Issue ID</i>	<i>Description</i>
EN-146948	Polycom Group Series endpoint did not receive video intermittently from RMX in an SVC conference.
EN-141716	Media card reboot observed due to FPGA error causing active calls to drop.
EN-142542	Calls were not getting connected due to cascade link failure between two MCUs.
EN-142741	Polycom QDX endpoint received garbled/no audio when it got connected with G719 Stereo mode.
EN-144188	Blurry content received at endpoint during ongoing conference due to presence of some noisy endpoints.svc
EN-129536	Hot backup got failed as HTTP response header length was growing dynamically and payload were wrongly read.
EN-148173	Cisco client Jabber received video at low rate 64kbps due to escalation from audio call to video call.
EN-150220	In Microsoft Skype for Business call scheduled with Skype online, AVMCU connection attempt got failed due to missing auto-redialing handling.
EN-153234	Video quality was significantly low in WebRTC call due to parameter value corruption during codec resolution calculation handling.
EN-147371	Avaya client was connected at low rate of 64kbps only as it was wrongly identified and processed as a Microsoft endpoint.
EN-137573	TIP calls were getting failed when encryption type was changed from DTLS to SDP.
EN-144666	Microsoft Skype for Business users did not get audio/video of endpoints connected at RMX when Skype client mutes RMX party.

These patch notes document only the changes from the prerequisite generally available (GA) release. Refer to the Release Notes for that GA release for the complete release documentation.

Prerequisites and Configuration Considerations
