Firmware Upgrade Instructions

This version of software is available on the Polycom Support FTP site:
<ftp.support.polycom.com>

Attention

When you update your software, services will be unavailable for several minutes. It is therefore advised that upgrades be performed during a window when traffic can be interrupted.

Tip

It is recommended you reboot the Polycom VBP appliance prior to doing the upgrade. This will ensure there is enough dynamic memory available to handle the upgrade process.

Upgrade Your Firmware

After saving your old configuration and rebooting your system, upgrade to new firmware as follows:

1. Log in to the VBP.
2. Choose **Upgrade Firmware** from the Configuration Menu
3. Use page defaults and click **Submit**.

Follow the progress of the upgrade using the **Refresh the upgrade status** link.

Warning

Do not change the configuration or power off the device until the write is 100 percent complete. The device may become unusable if the write is interrupted.

The system will automatically restart after the new image has been loaded. After the upgrade process has completed, check that the new version number is displayed on the main System page.
