Pairing the Base Station using the VVX Phone

You can pair the base station with the VVX phone from the Features menu on the VVX phone. When the base station is paired with the phone, the Handset icon on the phone.

Pair the Base Station via the PC Port

When the Ethernet cable is connected from the Base Station LAN port to the VVX PC port, the phone pairs with the base station automatically.

To pair with the base station via PC Port Pairing:
1. Connect an Ethernet cable from the LAN Port on the base station to the PC Port on the phone.
2. On the phone, navigate to Settings > Features > VVX D60 Configuration.
3. Select VVX D60 Profile, then select Enable.
4. On the VVX D60 Configuration screen, select Base Station, then select PC Port Pairing.

Pair the Base Station via Auto Pairing

When the Ethernet cable is connected from the Base Station LAN port into a LAN outlet, the phone pairs with the base station automatically.

To pair with the base station via Automatic Discovery:
1. On the phone, navigate to Settings > Features > VVX D60 Configuration.
2. Select VVX D60 Profile, then select Enable.
3. On the VVX D60 Configuration screen, select Base Station, then select Auto Pairing.
4. When the base station displays, select Pair.

Register a VVX D60 Wireless Handset

After the VVX D60 Base Station is paired with the VVX phone, you can register up to five wireless handsets to the base station.

To register the wireless handset with the base station:
1. On the wireless handset, navigate to Settings > Features > Registration, then select Register.
2. The wireless handset displays a message informing you to press the FIND button or register on the VVX phone.
3. Press and hold the FIND button on the base station for more than five seconds.
4. The wireless handset displays Register to VVX D60?
5. Select Yes to confirm the registration with the base station.
6. When the registration is successful, the screen displays Registration Successful.
