CX5500: Initial release. |
| 1.0.0            | December 2013 | CX5100: Initial release. |

Overview

The Polycom CX5100 and CX5500 Unified Conference Stations enable you to use the collaboration capabilities of Microsoft Lync voice, video, and content while automatically tracking the flow of conversation to support richer, more interactive communication. The following figure shows the CX5500 tabletop unit with LCD panel, the CX5100 tabletop unit, and the power data box for both systems.

Polycom CX5500 and CX5100 Unified Conference Systems

During a call, the integrated cameras capture the active speaker as well as the entire panoramic view of your conference room, and the integrated microphones capture the voices coming from any location around the table.

For larger conference rooms, you can add the optional satellite microphones.
What’s New in Version 1.1.2.1

Version 1.1.2.1 includes the features and functionality of previous versions and includes corrections for known issues. The corrected issues are listed in the Corrected Issues in Version 1.1.2.1 section of this document.

Hardware and Software Requirements

System performance can vary based on the connected computer, your network connection, and your Lync client version. The computer connected to the system should meet the minimum hardware and software requirements shown in the following table.

Minimum Requirements for the Connected Computer System

</table>
Using an extended USB cable or a USB 2.0 cable
If you plan to use a third-party USB 3.0 extension cable to connect the system to a computer, be aware that most extension cables can limit the data rate, reduce performance, and affect connectivity, even when connected to a USB 3.0 port.
When you connect the system to a computer by USB 2.0, the system displays a notice that your system could run faster.

Products Tested with This Release
Polycom CX5100 and CX5500 systems are tested with a wide range of products. The following list is not a complete inventory of compatible equipment. The list indicates products that have been tested for compatibility with this release.

You are encouraged to upgrade all your Polycom systems with the latest software before contacting Polycom Support to ensure the issue has not already been addressed by vendor software updates. Go to Polycom Service Policies to view the current Polycom Supported Products matrix.

Set Up the System
Place the tabletop device in the center of the conference room table, and connect the cables according to the configuration shown in the setup sheet shipped in the box with the system. You can also find the setup sheet at Polycom Voice Support.

To start up the system:
1. Connect the power cable to a power outlet.
   Green indicator lights flash during the startup process. When the green indicator lights stop flashing, the system is ready to use.
2. Power on the computer and connect the USB cable after the computer has started.
   Microsoft Lync automatically detects the system and selects it as the video and audio device for conferences.
You do not need to power the tabletop unit on and off.
Configure the CX5500 System

Update the Software

Check Polycom Support for software updates. When an update is available, choose one of the following methods to install the software.

To update the software manually by downloading the software to a flash drive:

1. Format a USB flash drive as FAT32.
   - If you are using a drive that is already formatted, ensure that previous software updates are deleted from the flash drive.

2. From the Polycom Support site, download the software package to the flash drive. The software package has a .tar extension.

3. Connect the USB flash drive to the USB 2.0 port on the tabletop unit or on the power data box. If you choose to connect to the power data box, first remove the rubber plug from the USB port.
   - The locations of the ports are shown in the following diagram.

4. On the CX5500, respond to the software update request displayed on the LCD touch screen.
   - The system detects the flash drive and starts the update within 30 seconds. The indicator lights begin to flash, indicating that the update has started.
   - The system reboots several times during the update. The indicator lights flash in several different patterns.
   - The update is complete when the indicator lights stop flashing.
To update the software on the CX5500 system through the Polycom Web Configuration Utility:

1. In the address field of a web browser, enter the IP address of the CX5500 system.
   - To obtain the IP address of the system, on the LCD touch screen, select Settings > Status > Platform > Phone.
2. Log in as an administrator.
   - Select Admin.
   - Enter the default administrative password 456.
   - Click Submit.
4. Choose one of the following update methods.
   - To specify a schedule for automatic updates:
     1. Select a day from the Update Frequency menu.
     2. Select a time from the Update Time menu.
     3. Click Save.
   - To update the software immediately:
     1. Choose one of the following:
        - To install from the Polycom server, select Polycom Hosted Server.
        - To install from a location to which you have saved the software, select Custom Server. Enter the path and address of the site in the Custom server address field.
     2. Click Update Now.
     3. In the Confirmation dialog box, click Yes.
     4. In the License Agreement dialog box, click Accept.
     5. In the Information dialog box, click OK.
        The indicator lights begin to flash, indicating that the update has started.
        The system reboots several times during the update. The indicator lights flash in several different patterns.
        The update is complete when the indicator lights stop flashing.
## Corrected Issues in Version 1.1.2.1

The following table lists issues that are corrected in version 1.1.2.1.

<table>
<thead>
<tr>
<th>Category</th>
<th>Issue ID</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Camera</td>
<td>MIL-1277</td>
<td>The Lync client was not seeing <strong>Active Speaker</strong> video. Video settings within the Lync client were outputting the message <em>Can’t connect to this camera</em>. Close any active conversations or other programs that are using your camera, and then try again. <strong>This issue has been corrected.</strong></td>
</tr>
<tr>
<td>Video</td>
<td>MIL-1274</td>
<td>In a video call with two other Lync clients, the CX5100 system had no local video and did not send video to the far end. Audio sent to the far end was choppy. This issue has been corrected.</td>
</tr>
<tr>
<td>Video</td>
<td>MIL-1290</td>
<td>The CX5100 system had no panoramic video or small picture video, with poor audio quality. The Lync client recognized the camera but displayed black video. This issue has been corrected.</td>
</tr>
</tbody>
</table>

## Known Issues

The following table lists known issues and available workarounds for the version 1.1.2.1 release.

<table>
<thead>
<tr>

<th>Issue ID</th>
<th>Found in Release</th>
<th>Description</th>
<th>Workaround</th>
</tr>
</thead>
<tbody>
<tr>
<td>System</td>
<td>MIL-540</td>
<td>1.0.0</td>
<td>On rare occasions, the CX5100 or CX5500 system is not detected after a user restarts the computer.</td>
<td>Manually restart the CX5100 or CX5500 system.</td>
</tr>
</tbody>
</table>
| System   | MIL-1229 | 1.1.2            | On the CX5500 system, the light of the LCD touch screen sometimes dims during a software update or when an incoming Lync call occurs during an active Lync call. During a software update, normal brightness returns after the first system reboot. System functionality is not affected when the LCD touch screen dims. | Try the following solutions:  
  - Minimize the window for the PC Lync call, and then tap the **PC Lync Call** tab to restore the screen.  
  - Set the LCD touch screen to the maximum brightness.  
    1. From the Home screen, select **Settings > Basic > Backlight Intensity > Maximum Intensity**.  
    2. Drag the slider all the way to the right. |
<table>
<thead>
<tr>
<th>Category</th>
<th>Issue ID</th>
<th>Found in Release</th>
<th>Description</th>
<th>Workaround</th>
</tr>
</thead>
</table>
| USB          | MIL-1039     | 1.0.0            | On rare occasions, the CX5100 system is not detected as a USB device after the CX5100 system or the computer is restarted.                                                                                | Try the following solutions:                                                                                                                                       | • Disconnect the USB cable from the computer and reconnect it.  
• Disconnect power from the CX5100 system and then reconnect it.  
• Update the USB 3.0 driver on the computer to ensure that the date of the driver is 2013 or later. For the latest driver, check the web site of your computer’s manufacturer.  
• Connect the computer directly to the blue USB 3.0 port on the power data box instead of the tabletop unit.  |
|              | VIDEO-109583 |                  |                                                                                       |                                                                                                                                                                                                                             |
|              | MIL-1021     | 1.0.0            | The computer might sometimes incorrectly identify the CX5100 system as a USB 2.0 device.                                                                                                                    | Try the following solutions:                                                                                                                                       | • Ensure that the system is connected to a USB 3.0 port. A USB 3.0 port is usually blue with an SS icon next to the port.  
• Disconnect the USB cable from the computer and reconnect it.  
• Update the USB 3.0 driver on the computer to ensure that the date of the driver is 2013 or later. For the latest driver, check the web site of your computer’s manufacturer.  
• Connect the computer directly to the blue USB 3.0 port on the power data box instead of the tabletop unit.  |
|              | VIDEO-109535 |                  |                                                                                       |                                                                                                                                                                                                                             |
| User Interface | VOIP-95347  | 1.1.0            | On the CX5500 system, the LCD touch screen freezes when you change the month setting to a future month.                                                                                                     | Change the setting in the Web Configuration Utility.                                                                                                               | 1 Log into the Web Configuration Utility:  
http://<CX5500 IP address>.  
2 Select Settings > Set Date/Time. |
| User Interface | MIL-1231     | 1.1.2            | The Incoming Lync Call notification is US English-only.                                                                                                                                                    | Use the Lync Client on the connected computer instead of the CX5500 user interface.                                                                                     |
Polycom Solution Support

Polycom Implementation and Maintenance services provide support for Polycom solution components only. Additional services for supported third-party Unified Communications (UC) environments integrated with Polycom solutions are available from Polycom Global Services and its certified partners to help customers successfully design, deploy, optimize, and manage Polycom visual communication within their third-party UC environments.

You must contact UC Professional Services for Microsoft Integration when integrating Polycom Conferencing for Microsoft Outlook and Microsoft Office Communications Server or Microsoft Lync Server.

For additional information and details, refer to Polycom Professional Services or contact your local Polycom representative.

Regulatory Information

Refer to the Polycom CX5500 Unified Conference Station User Guide and Polycom CX5100 Unified Conference Station User Guide, available at Polycom Voice Products Support, for regulatory information for those countries in which the CX5100 and CX5500 systems are approved for use.

In accordance with local laws and regulations, not all security options are available in all countries.

Get Help

To view the latest Polycom product documentation, visit the Support page of the Polycom web site at Polycom Support.
