

SoundPoint[®] IP / SoundStation[®] IP Family Technical Bulletin – TB47701
Notice of Product Change

This information applies to:

- All SoundPoint IP and SoundStation IP phones that support the use of the Polycom Productivity Suite
-

INTRODUCTION

In April 2008, the Polycom Productivity Suite started shipping. The Productivity Suite is a set of productivity applications designed to enhance a user's overall productivity and improve their user experience when using Polycom's SoundPoint IP and SoundStation IP phones.

CHANGES

1. The USB flash drive capacity has been improved to support flash drives over 2GB for the Local Call Recording application. A list of flash drives supported by the SoundPoint IP 650 and 670 can be found in [Technical Bulletin 38084](#) on the VoIP Technical Bulletin page on the Polycom Support web site. Activation of this improvement requires an upgrade to SIP 3.1.0 or later.
2. Best practices and recommended configuration settings for the SIP application when using the Corporate Directory Access application can be found in [Technical Bulletin 41137](#). It is also available from the VoIP Technical Bulletin page on the Polycom Support web site.
3. The Third Party Call Control API has been removed from the Polycom Productivity Suite. The use of Third Party Call Control (uaCSTA support) will be available as is in an upcoming maintenance release of SIP application (Q1 2009) at no additional cost—without the use of a license key.

STATUS

These changes are effective December 8, 2008. These changes will not impact your existing licenses or maintenance costs going forward.
