Before You Begin

The REST (Representational State Transfer) API feature, which provides a convenient, scalable, portable, and reliable API for interacting with Polycom Trio phones, enables users to execute certain functions and retrieve information.

This manual applies to the following Polycom Trio models: 8500 and 8800.

Prerequisite Information

Before you begin working with the REST API, note the following:

- The REST API feature is disabled by default.
- You must change the default administrator password before you can use the REST API.
- A post request must send the content-type as application/JSON. If this content-type is not sent by the client, the phone returns an HTTP 400 error.
- The REST API cannot accept more than 20 KB of data. If more than 20 KB of data is sent, the phone returns an HTTP 413 error.
- Parallel processing is not allowed. If one API is being processed and another API is received by the phone, the second request will receive an HTTP 403 error or will be queued for later processing.

Audience and Purpose of This Guide

The primary audience for this manual is the person administering the session initiation protocol (SIP) server, provisioning server(s), VoIP network, and Polycom UC Software that enables configuration and management of the phone features. This manual is not intended for end users. This manual provides information primarily for mid-level administrators with experience in networking who understand the basics of open SIP networks and VoIP endpoint environments.

Get Help

For more information about installing, configuring, and administering Polycom products, refer to the Documents and Downloads section at Polycom Support.

To access the latest Polycom UC Software Release Notes, refer to Polycom Voice Support.

To access the user guide for Polycom Trio conferencing phones, refer to the product support page for your phone at Polycom Voice Support.

Some Polycom products contain open source software. For details, refer to Polycom Support.

To find help or technical support for your phones, search for Polycom documentation at the Polycom Unified Communications (UC) Software Resource Center.
The Polycom Community

The Polycom Community gives you access to the latest developer and support information. Participate in discussion forums to share ideas and solve problems with your colleagues. To register with the Polycom Community, simply create a Polycom online account. When logged in, you can access Polycom support personnel and participate in developer and support forums to find the latest information on hardware, software, and partner solutions topics.
REST API Commands

This section describes the configuration parameters and API commands for Polycom UC Software, version 5.8.0.

Configuration Options

The REST API feature is disabled by default. The following parameters support the REST API feature and are editable by using the configuration file and Web UI only.

Configuration Parameters

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Permitted Values</th>
<th>Default Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>apps.restapi.enabled</td>
<td>0 or 1</td>
<td>0</td>
</tr>
<tr>
<td>log.level.change.restapi</td>
<td>0 – 6</td>
<td>4</td>
</tr>
</tbody>
</table>
## Commands and Structure

### Mgmt.Restart

<table>
<thead>
<tr>
<th><strong>Description</strong></th>
<th>This API executes a safeRestart on phone. safeRestart ensures that all calls on the phone are ended before initiating phone restart.</th>
</tr>
</thead>
</table>
| **Protocol, Method & Path** | Protocol: HTTP/HTTPS  
Method: POST  
Path: /api/v1/mgmt/safeRestart |
| **Input / Output Format** | JSON |
| **Access Level** | Admin |
| **Input** | None |
| **Output** | **Success Response:**  
{  
  "Status": "2000"  
}  

**Failure Response:**  
{  
  "Status": "5000"  
} |
| **Applicable return codes** | 2000, 5000 |
## Managment.Reboot

<table>
<thead>
<tr>
<th>Description</th>
<th>This API executes a safeReboot on the phone. safeReboot ensures that all calls on the phone are ended before initiating phone reboot.</th>
</tr>
</thead>
</table>
| Protocol, Method & Path              | Protocol: HTTP/HTTPS  
Method: POST  
Path: /api/v1/mgmt/safeReboot |
| Input and Output Syntax              | JSON                                                                   |
| Access Level                         | Admin                                                                 |
| Input                                | None                                                                   |
| Output                               | Success Response:  
{  
   "Status": "2000"  
}  
Failure Response:  
{  
   "Status": "5000"  
}  |
| Applicable return codes              | 2000, 5000                                                             |
Management.ConfigReset

<table>
<thead>
<tr>
<th>Description</th>
<th>This API resets the configurations.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Protocol, Method &amp; Path</td>
<td></td>
</tr>
<tr>
<td>Protocol: HTTP/HTTPS</td>
<td></td>
</tr>
<tr>
<td>Method: POST</td>
<td></td>
</tr>

</tr>
</tbody>
</table>
| Protocol, Method & Path | Protocol: HTTP/HTTPS  
Method: POST  
Path: /api/v1/mgmt/factoryReset |
| Input and Output Syntax | JSON |
| Access Level | Admin |
| Input | None |
| Output | Success Response:  

```json
{
  "Status": "2000"
}
```

Failure Response:  

```json
{
  "Status": "5000"
}
```
| Applicable return codes | 2000, 5000 |
### Management.NetworkInfo

**Description**
This API provides details about the phone’s network information.

**Protocol, Method & Path**
- **Protocol**: HTTP/HTTPS
- **Method**: GET
- **Path**: /api/v1/mgmt/network/info

**Input and Output Syntax**
JSON

**Access Level**
Admin

**Input**
None

**Output**

Success Response:
```
{
  "Status": "2000",
  "data": {
    "DHCP": "<Enabled/Disabled>",
    "DHCPServer": "<DHCP_SERVER_ADDRESS>",
    "DHCPBootServerUseOption": "<BOOT_SERVER_USE_OPTION>",
    "DHCPBootServerOption": "<BOOT_SERVER_OPTION>",
    "DHCPBootServerOptionType": "<BOOT_SERVER_OPTION>",
    "DHCPOption60Format": "<DHCP_OPTION60_FORMAT>",
    "IPV4Address": "<IP_ADDRESS>",
    "IPV6Address": "<IP_ADDRESS>",
    "DefaultGateway": "<GATEWAY>",
    "DNSServer": "<DNS_SERVER>",
    "AlternateDNSServer": "<DNS_SERVER>",
    "DNSDomain": "<DNS_DOMAIN>",
    "SNTPAddress": "<SNTP_ADDRESS>",
    "SubnetMask": "<SUBNET_MASK>",
    "LANPortStatus": "<Active/Inactive>",
    "LANSpeed": "<LAN_SPEED>",
    "VLANID": "<VLAN_ID>",
    "LLDP": "<Enabled/Disabled>",
    "CDPCompatibility": "<Enabled/Disabled>",
    "VLANDiscoveryMode": "<Disabled/Fixed/Custom>",
    "VLANIDOption": "<VLAN_ID_OPTION_VALUE>",
    "ProvServerAddress": "<PROV_SERVER_ADDRESS>",
    "ProvServerUser": "<PROV_SERVER_USER>",
    "ProvServerType": "<PROV_SERVER_TYPE>",
    "UpgradeServer": "<UPGRADE_SERVER>",
    "ZTPStatus": "<ZTP_STATUS>"
  }
}
```

Failure Response:
```
{
  "Status": "5000"
}
```

**Applicable return codes**
2000, 5000

    "data":
    {
        "UpTime": ">NETWORK_UPTIME>",
        "RxPackets": <NUM_OF_RX_PACKETS>
        "TxPackets": <NUM_OF_TX_PACKETS>
    }
}  
Failure Response:  
{
    "Status": "5000"
} |
| **Applicable return codes** | 2000, 5000 |
### Management.SetConfig

**Description**
This API provides the interface to set the configuration allowing a maximum of 20 parameters and up to 20 KB of content length for a given request.

**Protocol and Method**
- **Protocol:** HTTP/HTTPS
- **Method:** POST
- **Path:** /api/v1/mgmt/config/set

**Input and Output Syntax**
JSON

**Access Level**
Admin

**Input**

```json
{
  "data": {
    "<CONFIG_PARAM_NAME>": "<CONFIG_PARAM_VALUE>",
    "<CONFIG_PARAM_NAME>": "<CONFIG_PARAM_VALUE>",
    ...
  }
}
```

At least one parameter has to be provided.

**Output**

**Success Response:**

```json
{
  "Status": "2000"
}
```

**Failure Response:**

```json
{
  "Status": "<4xxx/5xxx>"
}
```

**Applicable return codes**
- 2000, 4000, 4001, 4009, 5000
- 4000 → Invalid Parameters,
- 4001 → Device busy (In case of lync web ticket generation or registration any setConfig returns this error code)
- 4009 → Parameter count exceeded limit of 20 parameters
Management.GetConfig

**Description**
This API provides running configuration value for given configuration parameters. The maximum is 20 parameters. The maximum content length for a request is 20 KB.

**Protocol and Method**
Protocol: HTTP/HTTPS  
Method: POST  
Path: /api/v1/mgmt/config/get

**Input and Output Syntax**
JSON

**Access Level**
Admin

**Input**
```json
{  
  "data":  
  [  
    "<CONFIG_PARAM_NAME_1>",  
    "<CONFIG_PARAM_NAME_2>",  
    ...  
  ]  
}
```

At least one parameter has to be provided.

**Output**
Success Response:
```json
{  
  "Status": "2000",  
  "data":  
  [  
    "<CONFIG_PARAM_NAME_1>":  
    {  
      "value": "<VALUE>",  
      "source": "<LOCAL/WEB/CONFIG/DEFAULT>"  
    },  
    "<CONFIG_PARAM_NAME_2>":  
    {  
      "value": "<VALUE>",  
      "source": "<LOCAL/WEB/CONFIG/DEFAULT/DEVICE>"  
    }  
  ]  
}
```

Failure Response:
```json
{  
  "Status": "5000"
}
```

**Applicable return codes**
2000, 4000, 4009, 5000  
4009 → Parameter count exceeded limit of 20 parameters
### WebCallControl.Dial

<table>
<thead>
<tr>
<th>Description</th>
<th>This API enables a user to initiate a call to a given number. Moreover, this API initiates the call and returns a response as an acknowledgment of request received.</th>
</tr>
</thead>
</table>
| Protocol and Method | Protocol: HTTP/HTTPS  
Method: POST  
Path: /api/v1/callctrl/dial |
| Input and Output Syntax | JSON |
| Access Level | Admin |

#### Input

```json
{
    "data": {
        "Dest": "<NUMBER/SIP_URI>",
        "Line": "<LINE_NUMBER>",
        "Type": "<SIP/TEL/H323>"
    }
}
```

- **Dest** – Mandatory Parameter
- **Line** – Optional. If Line is omitted from the input data the Trio will attempt to dial the Dest from the a matching line when multiple lines and dialplan line switching are configured. Otherwise line 1 will be used to dial.
- **Type** – Optional. Default type is TEL

#### Output

**Success Response:**

```json
{
    "Status": "2000"
}
```

**Failure Response:**

```json
{
    "Status": "<4xxx/5xxx>"
}
```

#### Applicable return codes

2000, 4000, 5000
The format is as indicated below where two parameters are required. The test@polycom.com is the SIPURI of the person that sent the invite. Item in blue is the Skype meeting ID.

```json
{
  "data": {
    "Dest": "test@polycom.com;gruu;opaque=app:conf:focus:id:ZTMVDGBH",
    "Line": "1",
    "Type": "SIP"
  }
}
```
### WebCallControl.EndCall

<table>
<thead>
<tr>
<th><strong>Description</strong></th>
<th>This API ends an active call.</th>
</tr>
</thead>
</table>
| **Protocol and Method** | Protocol: HTTP/HTTPS  
Method: POST  
Path: /api/v1/callctrl/endCall |
| **Input and Output Syntax** | JSON |
| **Access Level** | Admin |

#### Input

```
{
  "data": {
    "Ref": "<CALL_REFERENCE>"
  }
}
```

Ref is a mandatory parameter.

#### Output

**Success Response:**

```
{
  "Status": "2000"
}
```

**Failure Response:**

```
{
  "Status": "<4xxx/5xxx>"
}
```

#### Applicable return codes

- 2000, 4000, 4003, 4007, 5000
- 4003 → Operation not allowed. Like in case of call is on hold.
- 4007 → When call does not exist.
**WebCallControl.MuteCall**

<table>
<thead>
<tr>
<th>Description</th>
<th>This API enables a user to mute the phone, if applicable.</th>
</tr>
</thead>
</table>
| **Protocol and Method** | Protocol: HTTP/HTTPS  
Method: POST  
Path: /api/v1/callctrl/mute |
| **Input and Output Syntax** | JSON |
| **Access Level** | Admin |

**Input**

```
{
  "data":
  {
    "state": "<0/1>"
  }
}
```

State is a mandatory parameter.

**Output**

**Success Response:**

```
{
  "Status": "2000"
}
```

**Failure Response:**

```
{
  "Status": "<4xxx/5xxx>"
}
```

**Applicable return codes**

2000, 4000, 4003, , 4007, 5000  
4003 → Operation not allowed. Like in case of call is on hold.  
4007 → When call does not exist.
## WebCallControl.TransferCall

<table>
<thead>
<tr>
<th><strong>Description</strong></th>
<th>This API enables a user to transfer a call. In addition, this API always executes a blind transfer.</th>
</tr>
</thead>
</table>
| **Protocol and Method** | Protocol: HTTP/HTTPS  
Method: POST  
Path: /api/v1/callctrl/transferCall |
| **Input and Output Syntax** | JSON |
| **Access Level** | Admin |
| **Input** | ```json 
  
  {  
    "data":  
    {  
      "Ref": "<CALL_REFERENCE>",  
      "TransferDest": "<NUMBER>"  
    }  
  }  
``` |
|  | Ref is mandatory parameter.  
TransferDest is mandatory parameter. |
| **Output** | Success Response:  
```json 
  
  {  
    "Status": "2000"  
  }  
``` |
|  | Failure Response:  
```json 
  
  {  
    "Status": "<4xxx/5xxx>"  
  }  
``` |
| **Applicable return codes** | 2000, 4000, 4007, 5000  
4007→ When call does not exist. |
WebCallControl.SendDTMF

<table>
<thead>
<tr>
<th>Description</th>
<th>This API enables a user to send DTMF tones during an active call.</th>
</tr>
</thead>
</table>
| Protocol and Method | Protocol: HTTP/HTTPS  
|                    | Method: POST  
|                    | Path: /api/v1/callctrl/sendDTMF                                 |
| Input and Output Syntax | JSON                                                           |
| Access Level      | Admin                                                           |
| Input             | {  
|                   |   "data":  
|                   |     {  
|                   |       "Digits": "<DIGITS>"  
|                   |     }  
|                   | }                                                               |
|                   | Digits: mandatory parameter.                                   |
| Output            | "Response":  
|                   | {  
|                   |   "Status": "2000"  
|                   | }                                                               |
|                   | Failure Response:  
|                   | {  
|                   |   "Status": "<4xxx/5xxx>"  
|                   | }                                                               |
| Applicable return codes | 2000, 4000, 4007, 5000  
|                    | 4007 When call does not exist.                                 |
### WebCallControl.CallLogs

**Description**
This API provides the phone's call logs.

**Protocol and Method**
- **Protocol**: HTTP/HTTPS
- **Method**: GET
- **Path**:
  - `/api/v1/mgmt/callLogs`
  - `/api/v1/mgmt/callLogs/missed`
  - `/api/v1/mgmt/callLogs/received`
  - `/api/v1/mgmt/callLogs/placed`

**Input and Output Syntax**
- **Input**: None
- **Output**: JSON

**Access Level**
- **Admin

**Input**
- **Output**
  - Success Response for Path: `/api/v1/callctrl/callLogs`

```json
{
  "Status": "200",
  "data":
  {
    "missed": [
      {
        "LineNumber": "<LINE NUMBER>",
        "StartTime": "<START_TIME>",
        "RemotePartyName": "<REMOTE_PARTY_NAME>",
        "RemotePartyNumber": "<REMOTE_PARTY_NUMBER>",
        "Duration": "<DURATION>"
      },
      {
        "LineNumber": "<LINE NUMBER>",
        "StartTime": "<START_TIME>",
        "RemotePartyName": "<REMOTE_PARTY_NAME>",
        "RemotePartyNumber": "<REMOTE_PARTY_NUMBER>",
        "Duration": "<DURATION>"
      },
      ...
    ],
    "received": [
      {
        "LineNumber": "<LINE NUMBER>",
        "StartTime": "<START_TIME>",
        "RemotePartyName": "<REMOTE_PARTY_NAME>",
        "RemotePartyNumber": "<REMOTE_PARTY_NUMBER>",
        "Duration": "<DURATION>"
      },
      {
        "LineNumber": "<LINE NUMBER>",
        "StartTime": "<START_TIME>",
        "RemotePartyName": "<REMOTE_PARTY_NAME>",
        "RemotePartyNumber": "<REMOTE_PARTY_NUMBER>",
        "Duration": "<DURATION>"
      },
      ...
    ]
  }
}
```
"StartTime": "<START_TIME>",
"RemotePartyName": "<REMOTE_PARTY_NAME>",
"RemotePartyNumber": <REMOTE_PARTY_NUMBER>,
"Duration": "<DURATION>"
**WebCallControl.GetCurrentPresence**

<table>
<thead>
<tr>
<th><strong>Description</strong></th>
<th>This API provides the phone’s presence and is supported only for Skype for Business.</th>
</tr>
</thead>
</table>
| **Protocol, Method & Path** | Protocol: HTTP/HTTPS  
Method: GET  
Path: /api/v1/mgmt/getPresence |
| **Input and Output Syntax** | JSON |
| **Access Level** | Admin |
| **Input** | None |
| **Output** | Success Response:  
```json  
{  
  "Status": "2000"  
  "data": {  
    "Presence": "<Presence State>"  
  }  
}  
```  
Failure Response:  
```json  
{  
  "Status": "<4xxx/5xxx>"  
}  
``` |
| **Applicable return codes** | 2000, 4004, 5000  
4004 → This is supported on any other call servers. |
Network.UploadBgCapture

Description
This API uploads the phone’s captured network packets to a specified URL. If no URL is provided, then the API uploads the captured network packets to the default upload URL which is the provisioning server.

Protocol, Method & Path
Protocol: HTTP/HTTPS
Method: POST
Path: /api/v1/mgmt/network/uploadBgCapture

Input and Output Syntax
JSON

Access Level
Admin

Pre-condition
Packet capture configuration must be enabled to allow background packet capturing on the phone. URL must be configured or has to be passed as an argument with the API call.

Input
{
   "data":
   {
      "url": "<Absolute URL>"
   }
}

URL: optional parameter.

Output
Success Response:
{
   "Status": "2000"
}

Failure Response:
{
   "Status": "<4xxx/5xxx>"
}

If diags.pcap.enabled and/or diags.pcap.background.enabled configurations are not enabled, then the phone will reply with HTTP error code 404.
You cannot execute this API within 10 seconds of a previous uploadBgCapture command. A 4001 status code will be returned.

Applicable return codes
2000, 4000, 4001, 5000
WebCallControl.SipStatus

**Description**
This API provides the phone’s SIP level details for the user.

**Protocol, Method & Path**
- Protocol: HTTP/HTTPS
- Method: GET
- Path: /api/v1/webCallControl/sipStatus

**Input and Output Syntax**
JSON

**Access Level**
Admin

**Input**
None

**Output**
Success Response:
```
{
    "data":
    {
        "User":
        [
            {
                "Name": "3339940674"
                "TotalEvents": "2"
                "LineNumber": "1"
                "Events":
                [
                    {
                        "Type": "Register"
                        "Overlap": "120"
                        "CallID": "b8c9a1cb-cf11d4b-93c1850b@172.24.158.18"
                        "RegistrationState": "Registered"
                        "Expires": "6965"
                    },
                    {
                        "Type": "BLF"
                        "CallID": "7a8900cb-eb6900cb-a65900cb@172.24.158.18"
                    }
                ],
                "TotalCalls": "2"
            }
        ],
        "Calls":
        [
            {
                "CallState": "Hold"
                "CallID": "f64900cb-e64900cb-9e4900cb@172.24.158.18"
            },
            {
                "CallState": "Connected"
                "CallID": "d64900cb-d64900cb-d64900cb@172.24.158.18"
            }
        ]
    }
}
```
Success Response:
{
    "Status": "2000"
}

Failure Response:
{
    "Status": "5000"
}

| Applicable return codes | 2000, 5000 |
**WebCallControl.HoldCall**

<table>
<thead>
<tr>
<th>Description</th>
<th>This API allows the user to hold an active call.</th>
</tr>
</thead>
</table>
| **Protocol and Method** | Protocol: HTTP/HTTPS  
Method: POST  
Path: /api/v1/callctrl/holdCal |
| **Input and Output Syntax** | JSON |
| **Access Level** | Admin |
| **Input** | `{  
  "data":  
  {  
    "Ref": "<CALL_REFERENCE>"  
  }  
}` |
| **Output** | Success Response:  
{  
  "Status": "2000"  
}  
Failure Response:  
{  
  Status": "<4xxx/5xxx>"  
} |
| **Applicable return codes** | 2000, 4003, 4007, 5000 |
| **Notes** | Input is optional. If input is not provided, the active call or conference will be put on hold.  
If the call represented by "Ref" in input is in a conference, the conference will be put on hold. |
## WebCallControl.ResumeCall

<table>
<thead>
<tr>
<th>Description</th>
<th>This API resumes the call which was previously on hold.</th>
</tr>
</thead>
</table>
| **Protocol and Method** | Protocol: HTTP/HTTPS  
                          Method: POST  
                          Path: /api/v1/callctrl/resumeCall |
| **Input and Output Syntax** | JSON |
| **Access Level** | Admin |
| **Input** | `{  
  "data": 
  `{  
   "Ref": "<CALL_REFERENCE>"  
  }  
}  
Ref is a mandatory parameter |
| **Output** | Success Response:  
 `{  
   "Status": "2000"  
 }  
Failure Response:  
 `{  
   "Status": "<4xxx/5xxx>"  
 }  
**Applicable return codes** | 2000, 4003, 4007, 5000 |
| **Notes** | Input is optional. If input is not provided, the active call will be resumed if it’s on hold.  
If the call represented by “Ref” in input is in a conference, the conference will be resumed if it’s on hold. |
# WebCallControl.AnswerCall

**Description**
This API answers an incoming call.

**Protocol and Method**
- Protocol: HTTP/HTTPS
- Method: POST
- Path: /api/v1/callctrl/answerCall

**Input and Output Syntax**
- JSON

**Access Level**
Admin

**Input**
```json
{
    "data": {
        "Ref": "<CALL_REFERENCE>"
    }
}
```

**Output**
- Success Response:
  ```json
  {
      "Status": "2000"
  }
  ```
- Failure Response:
  ```json
  {
      "Status": "<4xxx/5xxx>"
  }
  ```

**Applicable return codes**
- 2000, 4000, 4003, 4007, 5000
- 4003 ➔ Operation not allowed. Like in case, call is not in an incoming state.
- 4007 ➔ When call does not exist.

**Notes**
Input is optional. The incoming call represented by "Ref" will be answered only if it's an active call.
### WebCallControl.IgnoreCall

**Description**
This API allows the user to ignore an incoming call.

**Protocol and Method**
- **Protocol:** HTTP/HTTPS
- **Method:** POST
- **Path:** /api/v1/callctrl/ignoreCall

**Input and Output Syntax**
- **Input:**
  ```json
  { 
    "data": 
    { 
      "Ref": "<CALL_REFERENCE>"
    }
  }
  ```
- **Output**
  - **Success Response:**
    ```json
    { 
      "Status": "2000"
    }
    ```
  - **Failure Response:**
    ```json
    { 
      "Status": "<4xxx/5xxx>"
    }
    ```

**Applicable return codes**
- 2000, 4003, 4007, 5000

**Notes**
Input is optional. The call represented by "Ref" will be ignored only if it's an active call.
### WebCallControl.RejectCall

<table>
<thead>
<tr>
<th>Description</th>
<th>This API allows the user to reject an incoming call.</th>
</tr>
</thead>
</table>
| **Protocol and Method** | Protocol: HTTP/HTTPS  
Method: POST  
Path: 
/api/v1/callctrl/rejectCall |
| **Input and Output Syntax** | JSON |
| **Access Level** | Admin |
| **Input** | `{  
  "data":  
  {  
    "Ref": "<CALL_REFERENCE>"  
  }  
}` |
| **Output** | Success Response: 
{  
  "Status": "2000"  
}  
Failed Response: 
{  
  "Status": "<4xxx/5xxx>"  
} |
| **Applicable return codes** | 2000, 4003, 4007, 5000 |
| **Notes** | Input is optional. The call represented by "Ref" will be rejected only if it's the active call. |
### Management.PollForStatus

| Protocol, Method & Path | Protocol: HTTPS  
Method: GET  
Path: /api/v1/mgmt/pollForStatus |
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Input and Output Syntax</td>
<td>JSON</td>
</tr>
<tr>
<td>Access Level</td>
<td>Admin</td>
</tr>
<tr>
<td>Input</td>
<td>None</td>
</tr>
</tbody>
</table>
| Output                  | Success Response:  
```  
{  
   "Status": "2000",  
   "data":  
   {  
      "State": "<Idle|Active|Error>",  
      ///// If State = Idle  
      "StateData": "<Time of last call 2015-04-07T19:11:07"  
      ///// If State = Active  
      "StateData": "<Active call duration>"  
      ///// If State = Error  
      "StateData": "<Any available Error information>"  
      ///// e.g. "All Phone applications are not ready."  
   }  
}  
```  
Failure Response  
```  
{  
   "Status": "5000"  
}  
``` |
| Applicable return codes | 2000, 5000 |
Management.GetTransferType

<table>
<thead>
<tr>
<th>Description</th>
<th>This API returns the current transfer type set on the phone.</th>
</tr>
</thead>
</table>
| Protocol, Method & Path | Protocol: HTTP/HTTPS  
Method: GET  
Path: /api/v1/mgmt/transferType/get |
| Output Syntax | JSON |
| Access Level | Admin |
| Input | None |
| Output | Success Response:  
{
  "data": {
    "Type": "<Consultative/Blind/Safe/Unknown>"
  },
  "Status": "2000"
}

Failure Response:  
{
  "Status": "5000"
}

| Applicable return codes | 2000, 5000 |
### Management.SetTransferType

<table>
<thead>
<tr>
<th>Description</th>
<th>This API sets the transfer type on the phone.</th>
</tr>
</thead>
</table>
| Protocol, Method & Path | Protocol: HTTP/HTTPS  
Method: POST  
Path: /api/v1/mgmt/transferType/set |
| Output Syntax | JSON |
| Access Level | Admin |
| Input | {  
  "data": {  
    "Type": "<Consultative/Blind/Safe>"  
  }  
} |
| Output | Success Response:  
{}  
  "Status": "2000"  
}  

Failure Response:  
{}  
  "Status": "<4xxx/5xxx>"  
} |
| Applicable return codes | 2000, 4000, 5000 |
### Management.Uixml

<table>
<thead>
<tr>
<th>Description</th>
<th>This API provides an XML representation of phone's user interface.</th>
</tr>
</thead>
</table>
| **Protocol, Method & Path** | Protocol: HTTP/HTTPS  
Method: GET  
Path: /api/v1/mgmt/uixml |
| **Output Syntax** | JSON |
| **Access Level** | Admin |
| **Input** | None |
| **Output** | Success Response:  
```json  
   {  
      "data": "<XML_DATA>",  
      "Status": "2000"  
   }  
```  
Failure Response:  
```json  
   {  
      "Status": "5000"  
   }  
``` |
| **Applicable return codes** | 2000, 5000 |
| **Note** | For soft keys involving "More", user must take the view-offset (view-offset="0:0" for the first set of keys, view-offset="320:0" for the second set of keys and so on) in UIMXML into consideration. To get the actual coordinates of a softkey on the screen, user should subtract the x value of view-offset from the x value of softkey coordinate. |
### Management.DeviceStats

**Description**
This API provides details about phone’s CPU and memory usage.

**Protocol, Method & Path**
- Protocol: HTTP/HTTPS
- Method: GET
- Path: /api/v1/mgmt/device/stats

**Output Syntax**
JSON

**Access Level**
Admin

**Input**
None

**Output**
Success Response:
```json
{
    "data": {
        "CPU": {
            "Current": "<CURRENT_CPU_LOAD>",

}

| Applicable return codes | 2000, 5000 |
Management.SimulateTouch

<table>
<thead>
<tr>
<th>Description</th>
<th>This API simulates touch events on phone.</th>
</tr>
</thead>
</table>
| Protocol, Method & Path | Protocol: HTTP/HTTPS  
Method: POST  
Path: /api/v1/mgmt/simulateTouch |
| Input and Output Syntax | JSON |
| Access Level | Admin |

**Input**
```json
{
    "data": {
        "Type": "<Tap/Press/Release/Swipe>",
        "Positions": [
            {
                "X": "<X_COORDINATE>",
                "Y": "<Y_COORDINATE>"
            }
        ],
        "Duration": "<DURATION_IN_MILLISECONDS>",
        "Easing": "<0-40>"
    }
}
```

**Output**
- Success Response:
  ```json
  {
      "Status": "2000"
  }
  ```
- Failure Response:
  ```json
  {
      "Status": "<4xxx/5xxx>"
  }
  ```

**Applicable return codes**
2000, 4000, 4009, 5000

**Note**
- For “Tap/Press/Release” events, only one position object is accepted.
- For “Swipe” events, a minimum of two and a maximum of five events are accepted.
- “Duration” is the time in milliseconds over which the event is simulated. This is an optional parameter.
- “Easing” represents the type of easing curve applied for the simulation. This is an optional parameter. Please refer to [http://doc.qt.io/qt-4.8/qeasingcurve.html#Type-enum](http://doc.qt.io/qt-4.8/qeasingcurve.html#Type-enum) for more information on the accepted values.
- This API will not work if the position provided is outside the screen boundary.
- For soft keys involving "More", user must take the view-offset (view-offset="0:0" for the first set of keys, view-offset="320:0" for the second set of keys and so on) in UIXML into consideration. To get the actual coordinates of a softkey on the screen, user should subtract the x value of view-offset from the x value of softkey coordinate.
### Management.SkypeSignIn

<table>
<thead>
<tr>
<th>Description</th>
<th>This API allows user to sign in to Skype for Business on phone.</th>
</tr>
</thead>
</table>
| Protocol and Method | Protocol: HTTP/HTTPS  
Method: POST  
Path: /api/v1/mgmt./skype/signIn |
| Input and Output Syntax | JSON |
| Access Level | Admin |
| Input | ```
{  
  "data": {  
    "Address": "<SIGN_IN_ADDRESS>>",  
    "User": "<USERNAME>>,  
    "Password": "<PASSWORD>>,  
    "Domain": "<DOMAIN>>,  
    "LockCode": "<LOCK_CODE>>"
  
  }
}
``` |
| Output | Success Response:  
```
{  
  "Status": "2000"
}
```  
Failure Response:  
```
{  
  "Status": "<4xxx/5xxx>"
}
``` |
| Applicable return codes | 2000, 4000, 4002, 4003, 4004, 5000 |
| Notes | • Response will be returned only after the sign in operation succeeds or fails or times out (150 seconds).  
• For accounts where domain is optional, empty string must be passed as value for "Domain".  
• “LockCode” is an optional parameter. |
### Management.SkypeSignOut

<table>
<thead>
<tr>
<th><strong>Description</strong></th>
<th>This API allows user to sign out of Skype for Business on phone</th>
</tr>
</thead>
</table>
| **Protocol and Method** | Protocol: HTTP/HTTPS  
Method: POST  
Path: /api/v1/mgmt/skype/signOut |
| **Input and Output Syntax** | JSON |
| **Access Level** | Admin |
| **Input** | None |
| **Output** | Success Response:  
{  
   "Status": "2000"  
}  
Failure Response:  
{  
   "Status": "<4xxx/5xxx>"  
} |
| **Applicable return codes** | 2000, 4003, 4004, 5000 |
**Management.CommunicationInfo**

<table>
<thead>
<tr>
<th><strong>Description</strong></th>
<th>This API provides information about any ongoing communication on phone. Note: This API provides RxTx port open information only. For actual packets sent/received API &quot;mgmt/media/sessionStats&quot; should be used.</th>
</tr>
</thead>
</table>
| **Protocol and Method** | Protocol: HTTP/HTTPS  
Method: GET  
Path: /api/v1/mgmt/media/communicationInfo |
| **Input and Output Syntax** | JSON |
| **Access Level** | Admin |
| **Input** | None |
| **Output** | Success Response:  
```json  
{"data": {  
"CommunicationType": [  
"<RxOnly/TxOnly/RxTx/None/Idle>",  
"<RxOnly/TxOnly/RxTx/None/Idle>"  
],  
"FarEndMuteState": [  
"<CONFERENCE_LEG_PHONE_NUMBER>",  
...  
"<CONFERENCE_LEGPHONE_NUMBER>"  
],  
"PhoneMuteState": "<True/False>"  
},  
"Status": "2000"  
}  
```
Failure Response:  
```json  
{"Status": "5000"  
}  
```
| **Applicable return codes** | 2000, 5000 |
Management.LocationInformation

<table>
<thead>
<tr>
<th>Description</th>
<th>This API provides the location information of the phone.</th>
</tr>
</thead>
</table>
| Protocol and Method | Protocol: HTTP/HTTPS  
Method: GET  
Path: /api/v1/mgmt/location/info |
| Input and Output Syntax | JSON |
| Access Level | Admin |
| Input | None |
| Output | Success Response: |
| | {
| | "data": {
| | "Country": "<Value>"  
| | "StreetGroup": "<Value>"  
| | "House Number": "<Value>"  
| | "State": "<Value>"

| | "Road SubSection": "<Value>"  
| | "City": "<Value>"  
| | "Neighbourhood Block": "<Value>"  
| | "Landmark": "<Value>"  
| | "Post Box": "<Value>"  
| | "Division": "<Value>"  
| | "Street": "<Value>"  
| | "Road Section": "<Value>"  
| | "Street1": "<Value>"  
| | "Street2": "<Value>"  
| | "Place Name": "<Value>"  
| | "House Num. Suff.": "<Value>"  
| | "Zip Code": "<Value>"  
| | "Road Pre Modifier": "<Value>"  
| | "Building": "<Value>"  
| | "Unit": "<Value>"  
| | "Floor": "<Value>"  
| | "Additional Code": "<Value>"  
| | "Room": "<Value>"  
| | "Postal Name": "<Value>"  
| | "Seat": "<Value>"  
| | "Road": "<Value>"  
| | "Road Branch": "<Value>"  
| | "Road Post Modifier": "<Value>"  
| | },  
| | "Status": 2000  
| | } |

Failure Response:
```json
{
    "Status": "5000"
}
```

| Applicable return codes | 2000, 5000 |
### Management.ExportConfiguration

<table>
<thead>
<tr>
<th><strong>Description</strong></th>
<th>REST Server within the phone receives a POST request with the URL in the data, and then exports the requested configuration to the provided URL.</th>
</tr>
</thead>
</table>
| **Protocol and Method**  | Protocol: HTTP/HTTPS  
Method: POST  
Path: /api/v1/mgmt/config/export |
| **Input and Output Syntax** | JSON |
| **Access Level**         | Admin |
| **Input**                | {  
   "data":  
   {  
     "Url": "<Absolute URL>"  
     "ConfigType": "<ConfigFiles|Local|Web|Device|All>"  
   }  
}  
URL: Mandatory parameter  
ConfigType: Mandatory parameter |
| **Output**               | Response:  
{  
   "Status": "2000",  
}  
Failed Response:  
{  
   "Status": "<4xxx/5xxx>"  
}  
Configuration would be sent to provided URL. In case of ConfigType "All", all the configuration would be uploaded except device. For device configuration, separate API has to be executed with ConfigType as "Device". |
| **Applicable return codes** | 2000, 5000 |
### Management.SessionStats

**Description**
This API provides statistics of active media sessions on phone.

**Protocol and Method**
- **Protocol:** HTTP/HTTPS
- **Method:** GET
- **Path:**
  `/api/v1/mgmt/media/sessionStats`

**Input and Output Syntax**
- **Input:** None
- **Output:**
  Success Response:

Failure Response:
{

"Status": "5000"
}

| Applicable return codes | 2000, 5000 |
### Management.CallStatus

**Description**
This API provides all the information of calls on the phone.

**Protocol and Method**
- **Protocol**: HTTP/HTTPS
- **Method**: GET
- **Path**: /api/v1/webCallControl/callStatus

**Input and Output Syntax**
- **Syntax**: JSON

**Access Level**
- **Admin**

**Input**
- **None**

**Output**
**Success Response:**
```json
{
    "Status": "2000",
    "data": {
        "CallHandle": "<9577dd30>",
        "Type": "<Incoming>",
        "Protocol": "<SIP>",
        "CallState": "<Connected>",
        "LineID": "<1>",
        "RemotePartyName": "<3339941432>",
        "RemotePartyNumber": "sip:1432@10.240.10.210",
        "DurationInSeconds": "<7>"
    }
}
```

**Failure Response:**
```json
{
    "Status": "<4xxx/5xxx>"
}
```

**Applicable return codes**
- 2000, 4007, 5000
## Management.LineInfo

### Description
This API provides details about the phones's line's information.

### Protocol and Method
- **Protocol**: HTTP/HTTPS
- **Method**: GET
- **Path**: `/api/v1/mgmt/lineInfo`

### Input and Output Syntax
- **Input**: None
- **Output**: JSON

### Access Level
- **Admin**

### Output
**Success Response:**
```json
{
  "Status": "2000",
  "data": [
    {
      "LineNumber": "<LINE_NUMBER>",
      "Protocol": "<SIP/H323>",
      "SIPAddress": "<SIP_ADDRESS>",
      "ProxyAddress": "<PROXY_ADDRESS>",

      "Port": "<PORT>"
    },
    ...  
    ...
    ...  
  ]
}
```

**Failure Response:**
```json
{
  "Status": "<4xxx/5xxx>"
}
```
| Applicable return codes | 2000, 5000 |
# Management.LineInfo Version 2

## Description
This API provides details about the phone's line information.

## Protocol and Method
- **Protocol**: HTTP/HTTPS
- **Method**: GET
- **Path**: `/api/v2/mgmt/lineInfo`

## Input Syntax
Query parameters

## Output Syntax
JSON

## Access Level
Admin

### Input
The following query parameters are accepted:
- `line=<1>`

Example queries:
- `<PHONE_IP>/api/v2/mgmt/lineInfo?line=1`

### Output
**Success Response:**
```
{
  "data": [
    {
      "ID": "<LINE_NUMBER>",
      "Label": "<LABEL>",
      "Username": "<USERNAME>",
      "Assigned": "<True/False>",
      "RegistrationStatus": "<Registered/Unregistered>",
      "Type": "<Private/Shared>",
      "Active": "<True/False>",
      "DoNotDisturb": "<True/False>",
      "CallAppearances": [
        "<CALL_REFERENCE>",
        ...
      ],
      "CallServers": [

### WebCallControl.CallStatus Version 2

**Description**
This API provides information about all the calls present on phone.

**Protocol, Method & Path**
- **Protocol**: HTTP/HTTPS
- **Method**: GET
- **Path**: /api/v2/webCallControl/callStatus

**Output Syntax**
JSON

**Access Level**
Admin

**Input**
The following query parameters are accepted:

- handle=<9577dd30>
- line=<1>
- sequence=<1>

API accepts only:
- * handle or
- * line or
- * line and sequence

Example queries:
- `<PHONE_IP>/api/v2/webCallControl/callStatus`
- `<PHONE_IP>/api/v2/webCallControl/callStatus?handle=b5576ff8`
- `<PHONE_IP>/api/v2/webCallControl/callStatus?line=1`
- `<PHONE_IP>/api/v2/webCallControl/callStatus?line=1&sequence=1`

**Output**

```json
{
  "Status": "2000",
  "data": [
    {
      "CallHandle": "b5576ff8",
      "Type": "Incoming",
      "RemotePartyName": "Test 1171",
      "RemotePartyNumber": "1171",
      "CallState": "Connected",
      "Protocol": "SIP",
      "StartTime": "2017-08-24T12:07:49",
      "DurationSeconds": "25",
      "LineID": "1",
      "CallSequence": "1",
      "UIAppearanceIndex": "1*",
      "Ringing": "0",
      "Muted": "0",
      "RTPPort": "2262",
      "RTCPPort": "2263",
    },
    ...
    {
      "CallHandle": "8901078",
      "RemotePartyNumber": "",
      "Type": "Outgoing",
      "UIAppearanceIndex": "0",
    }
  ]
}
```
"CallState": "Connected",
"Ringing": "0",
"Muted": "0",
"CallSequence": "1",
"RemotePartyName": "",
"RTCPPort": "2227",
"Protocol": "PTT",
"DurationInSeconds": "2",
"RTPPort": "2226",
"StartTime": "2017-08-24T11:56:33",
"LineID": "0",
"Channel": {
    "Mode": "Ptt",
    "Number": "1",
    "Label": "Channel",
    "State": "WAITING"
}

Failed Response:
{
    "Status": "<4xxx/5xxx>"
}

</thead>
</table>
| Note                    | During an active call, a "***" will be appended to UIAppearanceIndex number. The following case is applicable for Paging/PTT calls:
|                          | - Channel object will be present only if it's a Paging/PTT call. |
### ManagementDeviceInfo Version 2

**Description**
This API provides general device information.

**Protocol and Method**

**Protocol**: HTTP/HTTPS  
**Method**: GET  
**Path**: 
/api/v2/mgmt/device/info

**Input and Output Syntax**

**JSON**

**Access Level**

**Admin**

**Input**

**None**

**Output**

**Success Response**:

```json
{
  "data": {
    "ModelNumber": "<PHONE_MODEL>",
    "DeviceVendor": "Polycom",
    "DeviceType": "HardwareEndpoint",
    "MACAddress": "<MAC_ADDRESS>",
    "Firmware": {
