

Release Notes: SoundPoint IP - SIP

Software Revision

These release notes cover Polycom's SoundPoint IP - SIP version 1.0.9 (released July 17, 2003).

Document Revision

These release notes may be updated during the life of this release as any issues are reported. This document was last updated July 17, 2003.

Hardware Support

This release of software is compatible with the following SoundPoint IP products:

SoundPoint IP 500
SoundPoint IP 600

BootRom Requirements

This software requires a bootrom version of 2.3.0 or later to be installed on all phones. The most current *bootrom.ld* file is available on the Polycom Resource Network (<http://extranet.polycom.com/>) to authorized resellers.

3rd Party Support

This software has been verified interoperable with the following 3rd Party equipment:

BroadSoft BroadWorks 8.0 and 8.1

Resolved Issues

The following issues have been resolved in this release:

ID	Issue
3937	CANCEL should not have to tag
4098, 4291	Phone is not able to retrieve held call after session audit
4299	Local phone settings cleared when an error occurs when downloading from a TFTP server
4563	Add support for half-width Kana (Japan)
4582	BootROM 2.4 doesn't work with SIP application 1.0.8
4599	Date short format is not properly supported
	Updated Japanese_Japan Dictionary

Release Notes: SoundPoint IP - SIP

Features Added

The following features have been added in this release:

None.

Known issues

The following problems are known to exist and will be addressed in a future SW Release:

ID	Issue	Workaround
1626	VAD is not supported	None
1931	URL dialed calls in received and missed call lists can't be redialed	None
2012	Cannot initiate a blind conference	None
2278	Directory searches are case-sensitive ('a' is distinct from 'A')	Enter the search criteria using the same case as the directory text
3742	Blind Transfer can fail thru some SIP gateways	Wait for Called Party to answer
4603	SRV Records do not use Priority Field	Use Weight field only

Distribution

The following files constitute the 1.0.9 distribution of the SoundPoint IP SIP application. For centrally provisioned systems, copy these files to the boot server, maintaining the folder hierarchy present in the zip file. Some of the configuration files must be modified. Refer to the *SoundPoint IP SIP Administrator Guide* for details. This document can be downloaded from the Polycom Resource Network (<http://extranet.polycom.com/>) by authorized resellers.
